

At 3am, the
incident does
not care
about your
org chart.

**It follows
the
architecture,
not the
reporting
lines.**

The outage
lives in
the seams
that no
single
team owns.

**Your org chart shows
who reports to whom.
The architecture
shows what depends on
what. Only one tells
the truth at 3am.**

**Map the
seams
before
the night
they
matter.**
